

Rapid Build Masonry Joist Hanger

The RB-JHI hanger is a timber to masonry hanger range designed for use with I-Joists, open web & solid timber joists/trusses. The RB-JHI combines the standard JHI hanger with a reinforced top plate to provide a superior level of performance.

Features & Benefits

- The addition of the reinforced top plate keeps the hanger in position eliminating the need for masonry above (unless required for further additional performance)
- Supporting block work only needs to cure for 3 days instead of the standard 28 days for traditional masonry hangers, speeding up the build process
- A major contribution to compliance with air leakage - Part L1 Building Regulations

Material Specification

- Galvanised mild steel - Z600

Fixings

Fixings required into incoming member only. No fixings required into masonry.

Rapid Build Masonry Joist Hanger

In Situ

- Suitable for use with Open Web Joists, I-Joists and trusses
- Non return hangers are suitable with no masonry above. Return only required for increased load capacity

- **No masonry** is required above the hanger (unless stated for increased load capacity).
- The masonry supporting the hanger must be cured for **3 days** prior to loading the floor.
- The RB-JHI/RB-JHIR does not provide restraint, therefore restraint straps may be required (see pages 132 - 133)

Enhanced Uplift

- Fixings into the incoming joist/truss are required to resist uplift
- Increased uplift figures can be achieved by nailing the additional triangular nail holes into the incoming member
- Web stiffeners required for I-Joists, 2No end blocks required for Open Web Joists & minimum bottom chord depth/vertical required for trusses

Incorrect Installation

Do not install the hanger with a gap between the hanger and the face of the block work.

Do not install the hanger onto a timber wall plate.

Do not install the hanger with a gap exceeding 6mm between the joist/truss and the hanger.

Do not cut/modify the top flanges. These are critical to the performance.
